

一般抵抗溶接用

溶接電流計

SP-3221

WELDING MONITOR SP-3221

■ SUMMARY

This welding meter is to determine welding current and time for almost all kinds of resistance welding with indicating weld data number, present time, by weld cycles, conduction angle by degrees all in digital figures. Data are to be indicated on LCD display and at the same time stocked in self contained digital memory up to 100 data. The stocked data could be output to PC via USB terminal and cable for data recording and data analyzing at conventional and typical PC operated by Windows. The application soft ware shall be provided by CD-ROM attached in the package.

In cases of AC or Rectified DC welding, secondary current value shall be of calculated as of effective value with all each half cycle and root mean square. Only for the capacitor discharged welders, current should be of peak value and time by milli-Second exceptionally.

For continuous operation as for monitoring welding current, AC adaptor should be employed as of power supply with floating and data should be no limitation for large scale welding data.

■ FEATURES

- * Because of adoption of Nicd BATTERY, the body became compact and handy in size.

 Sensor coil is MEKANO patented non-core toroidal coil which has become world wide standard of resistance welding measurement.
 - Accuracy comes up to within plus & minus 2 %
- * Almost all kinds of resistance welding have been covered by these instruments. Study details at the following specific data table.
- * Memory equipped inside has capability of store of 100 shots data & moreover when data are sent to PC, no limitation for recording.
- * Wide range of coverage so as current max. 99. 9KA and time max. 300 cycles.

■SPECIFICATION

INDEX		DESCRIPTION
WELDING MODE		For each welding current & cycles of: Single phase AC, Single
		Phase Rectified, 3 Phase Rectified, Invert red, Capacitor
		Discharged, Continuous Seam, Pulsation
Amperage	Ranges	500A~999A/0. 5A~9. 99A/8. 0kA~19. 9kA/5. 0kA~99. 9kA
	Value	Average of effective value
	Accuracy	±2% at full scale
Time	Ranges	CYCLE : 0.5∼300CY, mSec : 0.1∼300mSec
	Value	For all term: Cycles
	Accuracy	For finishing point (To): mSec.
Power source		Equipped NiCd Battery: 5KR-100AAU(1100mAH)
		AC adaptor Mekano HL-12/1-BEGS (AC100V~240V)
Dimension & Weight		100mmW × 180mmH × 33mmD / 1.6kg
Accompaniment		Sensor coil PU-11 (dia 260mm) 、Strap
		USB Cable, CD-ROM, Case, Manual, Inspection

■概要

本機はスポット溶接の溶接二次電流と通電時間を測定し、結果をデジタル表示する溶接電流計です。 測定したデータは、内蔵メモリーに蓄えられUSBケーブルを介してPCに送ることが可能です。 溶接二次電流が、「交流式」又は「整流式」溶接機の場合、半サイクル毎の実効値演算を行い、 電流平均実効値と通電時間を測定表示します。

コンデンサー式溶接機の場合、最大電流値とピーク迄の時間(又は通電終了迄の時間)を測定表示します。

■特徴

- ◇ ニッカドバッテリーの採用により小型・軽量化を実現しました。 持ち運びも便利になり 測定場所を選びません。
- ◇ 作業タクトの速い溶接でも、最大100打点までデータを記憶。
- ◇ PCに接続することにより連続使用が可能となり100打点以上の記録が可能となります。
- ◇ P C へのデータ出力の際には「I D カウントNo,」「時分」「電流値」(A・k A)「通電時間」 (CY又はms)「導通角度」(DEG)を出力します。
- ◇ 通電時間の測定は、最大300サイクル迄測定可能なワイドレンジ。

■仕様

*製品改良等により、外観及び性能の一部を予告無く変更することがあります。
